1997 - 2004: The BECK Group
Dallas, Texas Project Manager

John Farr specializes in building enclosure consulting, particularly with waterproofing and exterior wall and facade systems. He has extensive experience in a variety of areas relating to the design and construction of building enclosure systems in new construction, as well as the assessment, repair and rehabilitation of building enclosure systems at existing facilities.

Mr. Farr is experienced in the design and construction of building enclosure systems for new construction projects ranging from commonplace and straight forward designs to extremely complex project geometries and unitized wall and facade systems. He has performed construction observation and QA/QC roles for new construction projects to evaluate and test installed building enclosure systems and critical interfaces between systems.

Mr. Farr is knowledgeable in the evaluation and repair of existing building enclosure systems. He has led and managed a wide variety of projects, including the investigation and documentation, design of repairs, problems in roofing, waterproofing, exterior wall systems, and aluminum-framed curtain wall and storefront systems.

Mr. Farr has worked as both a project manager and quality assurance manager for two large, commercial general contractors. This experience and ability to coordinate multiple disciplines enable him to provide meaningful solutions for the clients' building challenges. He provides expertise not only on the building enclosure systems themselves, but also on constructability, schedule and sequencing issues and logistics, and development of cost estimates.
